Jevin Mintah

Module 4: Data Analysis Pandas

1. Summarizes the analysis

    i. With each of the schools it looked like the overall test scores were passing. The school budget for each school did not really affect how high or low the students' test scores were. The test scores were high for each student no matter the budget of their school they attended. But one big takeaway that charter schools had significantly better test scores compared to district schools.

2. Draws two correct conclusions or comparisons from the calculations

    i. It looks like the smaller and medium school sizes had better test scores compared to the larger schools sizes. No matter the school budget the test scores between each school seemed similar.
